

June 12, 2026

Dear Customer,

End-of-Sale Notification – Wayfinder DVL

This advisory informs customers and sales partners that Teledyne RD Instruments has initiated the End-of-Sale (EOS) process for the Wayfinder DVL.

Effective June 12, 2026, the Wayfinder DVL has been removed from the active TRDI Navigation product line. Production will continue only for orders placed prior to this announcement. Existing service commitments and spare parts support will continue where feasible and subject to parts availability. Technical support will continue indefinitely.

TRDI recommends Pathfinder DVL as the primary replacement option for most applications, offering improved bottom-tracking accuracy, extended range, and availability in both OEM and self-contained configurations. For customers seeking an integrated navigation solution, the recently launched Compact Navigator combines DVL and INS technology in a single streamlined package.

Customers and sales partners with active quotes, open opportunities, or projects specifying Wayfinder DVL should contact their TRDI sales representative to confirm availability and identify the most appropriate replacement configuration.

TRDI remains committed to supporting customers through this transition and helping identify the best navigation solution for each application.

Best regards

Grant Jennings
Product Line Director
Teledyne RD Instruments
